Installation Guide Front Plate Mount for 2022-23 Outback Wilderness

Remove the towing connector cover. You can install this one either the left or right side of your front bumper.

Insert the first part of the license plate mount at an angle and then prop it up vertically as shown above.

Use the two smaller countersunk hex head screws to secure the smaller part of the plate mount. It will fit snugly. This locks it in place to your bumper.

Using the two larger hex head bolts and washers, connect the license plate bracket to the bumper mount. Make sure bracket is mounted inward towards the center of the bumper.

Finally, attach your license plate with the screws that are supplied with the license plate bracket.
